ARN supports locally led, locally relevant research agendas defined by African researchers and their institutions. With ARN support, African researchers in development economics and related fields define and lead large-scale research priorities. ARN also establishes connections to an international development community that offers research funding and assistance to scale field-tested programs and policies. This approach will narrow the gap between national pilot studies and national program design, increasing the impact of research investments.

The ALL-IN Research Network Virtual Launch introduces the network's mission, vision and key objectives. The event also outlines the initiative's implementation as well as partnership opportunities for researchers, policy makers and stakeholders across the field of development.

ARN is a collaborative initiative between the Feed the Future Innovation Lab for Markets, Risk and Resilience and the International Center for Evaluation and Development (ICED).

Background & Motivation

The challenges of poverty and resilience are dynamic. Designing, testing and sustaining innovative solutions requires shifting the locus of research control to African economists. To this end, ARN supports leadership and innovation in research for development by empowering and mobilizing the emergent capacity of African researchers and research institutions.

ARN researchers take the lead in defining research priorities, drawing in additional global research partners as needed to supplement their own skills, talents and ideas. A focus on a local research agenda utilizing local knowledge and connections also helps close the gap between evidence and policy. ARN is a collaborative initiative between the International Centre for Evaluation and Development (ICED) and the Feed the Future Innovation Lab for Markets, Risk and Resilience at the University of California, Davis.
